

Step1: Create Storage Account for storing images:

name: imgstormak
blob container: images
upload few images (refer Images folder)
Go to access key and copy connection string

Step2: Create App service for Web API deployment:

name: imgapimak
.net 6 code
plan: Standard S1
configuration → app setting → create new and copy connection string which copied earlier

Step3: Deploy code to Web API:

Step 1: az login
Step 2: az webapp list --resource-group az204-rg
Step 3: az webapp deployment source config-zip --resource-group az204-rg --src api.zip --name web-app-name
Step 4: Copy url of Web API appservice

Step4: Web app deployment:

az login
az webapp list --resource-group az204-rg
az webapp deployment source config-zip --resource-group az204-rg --src web.zip --name imgwebmakarand
copied earlier to app url paste it to appsettings.json and redeploy app
