1. Create App Service in portal.
2. Deployment → Deployment Center → Setting → Select Local Git as source.
3. Take a clone of repo which you have created just now.
4. add files to the project.
5. stage them and commit it to local repo.
6. change the name of your local branch (git branch -M master), because name of remote branch is master.
7. push it to remote → git push -u origin master.
